Frustrated with your bill validators always jamming?

Relax, be jam-free with MEI.

Keep your games running, not your service technicians.

A bill jam shuts down your game, costs you a service call, and worse, can jeopardize placements at your prized locations. That is why MEI has spared no effort in virtually eliminating bill jams. With over 4,000,000 bill validators sold worldwide and 20 years of applying advanced technology, the MEI® Series 2000 bill validator uses…

- **Non-contact sensing, eliminating pinch points**
- **Patented dual-shot tools, assuring no edges to catch a limp bill**
- **Secure multi-wavelength sensors for high security**

These features increase bill acceptance, and provide the industry's lowest jam rate resulting in happier consumers, fewer service calls, more profitable locations, and, of course, a chance to relax.

Although both companies continue to do business under their original names, they leverage a shared commitment to quality-focused product development, world-class customer care and unrivaled distribution capabilities and reach. Presentation

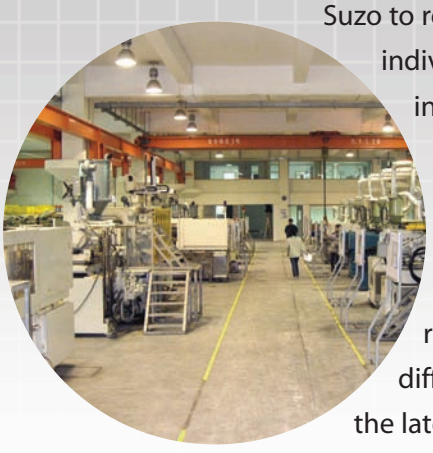
Global capability and scale

Suzo-Happ Group has nearly 450 employees in 18 locations serving customers in over 70 countries.

Each branch of Suzo has responsibility for its own markets and for its own customers. This allows Suzo to react quickly either individually or as a group to international, national, regional and local developments. Suzo supplies its customers with a comprehensive range of over 30,000 different products. From the latest in-house change machine to a simple rubber ring for a pinball machine, Suzo can service every corner of the globe. At present, Suzo exports to 63 different countries, to cover the ever-expanding world market.



Happ distributes over 40,000 items to the North American market utilizing a national sales force and seven distribution centers in Illinois, Nevada, Pennsylvania, Indiana, Wisconsin, South Carolina and Minnesota. It distributes products for leading manufacturers in the gaming, amusement and vending marketplace.

Innovative customer-centric engineering

The merger of Suzo and Happ provides an opportunity to add resources to the organization, provide better service to customers and a world-class platform for research and development activity.

Research and development is one of the top priorities. Suzo-Happ Group prides itself on having well educated specialists working in its R&D department, who anticipate the needs of customers and develop new and more sophisticated product lines everyday.

The engineering team at Suzo-Happ Group has over 200 years of engineering development experience on three continents and is continuously developing new and innovative products.

Solutions focused

Suzo-Happ Group has the ability to broaden its product lines, streamline its global distribution capabilities and create value-added solutions for its increased customer base.

On top of selling well-known brand names, Suzo develops its own products under the STC label, which are developed for the industry and manufactured under its own control. These include quality components, complex electronics, software and complete finished products.

Suzo also programs software for various money processing machines, such as gaming machines and change machines, and takes the initiative on new products and problems that may affect its customers in the future.

Producing Euro-friendly parts and machines has given Suzo an edge when it markets its new products to customers, who will be affected by the problems of changing their currency to the Euro. Everything is directed at the production of modern, sophisticated and user-friendly products.

Service commitment

Suzo takes a consultative approach to serving its customers with comprehensive after-sales services within its own technical and marketing departments.

At Suzo's head offices in Holland, all its warehousing is fully bar-coded, and this coupled with its real-time data processing system, produces accurate reporting of inventory and shortened, reliable delivery times.

Happ's culture of efficiency drives its operations. An order received by phone or online is usually picked, packed, shipped and invoiced within a couple of hours. Moreover, a highly structured internal tracking system allows sales staff and customers to follow each order every step of the way.

As products are invoiced, the company's inventory database is automatically updated and shipment tracking details are sent via e-mail as well.

Happ also maintains repair facilities in Illinois, Las Vegas, and New Jersey. Happ is a repair center for Ceronix monitors, MEI bill validators, Wells-Gardner monitors, CashCode bill validators, and Midway and other amusement game boards.

3M MICROTOUCH CLEARTEK™ TOUCH SCREENS

Extended Durability for High-use Applications

MicroTouch™ ClearTek™ capacitive touch screens, manufactured by 3M Touch Systems, are the preferred touch solution for applications that require fast and accurate touch performance. The flat capacitive Profile sensor incorporates advanced construction and production techniques that result in a thin, sleek design which provides easy installation into flat panel displays and flat CRTs. The robust touch characteristics of ClearTek are attributed to its transparent overcoat, which significantly increases the physical durability of the surface by allowing it to resist scratches and abrasions. Popular applications include kiosks, ATM installations, point-of-sale, industrial equipment, gaming machines, and vending.

Making the Difference

ClearTek capacitive touch technology provides accurate and sensitive response to the user's touch while offering outstanding durability. A ClearTek capacitive touch screen provides scratch-resistance and contaminant-resistance to dirt, liquids, and harsh chemicals. A ClearTek sensor with Industrial Etch has been tested in a laboratory environment to withstand over 225 million mechanical touches without noticeable degradation to the surface.*

When it comes to games, "almost" is never good enough.

Keep your games running, not your service technicians.

Don't lose profits by using bill acceptors that don't deliver the reliability and performance you need. With a massive field base of more than 2,000,000 units, MEI Series 2000 bill acceptors reflect continuous improvement. This includes a less-than-2% annualized failure rate. Competitive bill acceptors just can't compete with our proven track record.

As the world's best-selling bill acceptor, the Series 2000 uses 100% optical scanning technology to increase bill acceptance, resulting in the industry's lowest jam rate. That means more uptime, increased revenue, and fewer service calls for every machine you operate.

Stay ahead of the game with MEI.

escendo HOPPER

SUZO®

NEW

ESCENDO ESCALATOR HOPPER

From one of the worlds largest casino hopper manufacturers, Suzo, comes the Escendo Escalator Hopper. This hopper solves most existing escalator hopper problems. These improvements are the result of nearly 5 years of development and have resulted in two world wide patents.

- The Escendo Escalator Hopper has a unique rotor system and brush track.
- The patented rotor system ensures one-by-one coin entry into the brush track, eliminating shingling (overlapping coins) which mostly results in a coin jam.
- As the coin comes into the track the coin is pushed towards the back plate by the patented brushes. It is totally insensitive to damaged or bent coins which often end up in a hopper jam.
- The brushes in the track are placed in a diagonal upward position pushing the coin upwards but preventing the coin from going down again. The result is low power consumption and less wearing parts.
- The planetary gearbox system guarantees low power consumption and silent operation. (Optionally available on 12VDC)
- Low maintenance and easy accessible are key in the Escendo hopper. The coin track is open on one side for visual inspection.
- The combination of these features has resulted in a service friendly hopper with extremely high performance.

Features:

- High performance and reliability.
- Low maintenance and easy accessible.
- Planetary gearbox for low power consumption and silent operation.
- Easy to change denomination between 0.83" – 1.18" (21 - 30 mm) or 1.19" – 1.57" (30.1 - 40 mm)
- Choice of optical or induction sensors for coin read out.
- Customized cups and frames possible, equal to side pay-out hoppers from Suzo.
- Selection of control boards available.

Technical specifications:

- Applicable coin size: diameter 0.83" – 1.57" (21 - 40 mm), thickness 0.06" – 0.13" (1.5 - 3.2 mm) On special request: coin size diameter 1.77" (45mm)
- Pay out speed: 210 - 420 coins per minute depending coin size.
- Voltage 12 or 24VDC.
- Power consumption (current):

DRIVER INTERFACE CABLE

NEW

SUZO®

- This interface solves the problem when the switching transistor in the host machine is not powerful enough to drive the CUBE HOPPER. It also fixes the problem of coins remaining in the coin exit.
- This occasionally happens if the "STOP" command is received too early. By checking the coin-out sensor, the interface will turn the motor until the coin blocking the optic sensor is ejected and cleared.

AZKOYEN HOPPER

The **AZKOYEN HOPPER "E"** can be used in the majority of change or coin / token pay out applications since it is not coin specific and has features and options that make it very versatile.

- Available in 12vdc or 24vdc
- Normal hopper or natural overflow, that avoids sophisticated software to control the hopper overflow (this overflow level could be customized).
- High level switch to detect, working on a weight principle, when the hopper is full and to report back to the machine software so it can route the excess coins into the cashbox. This level is adjustable with a screw.
- Low level switch for empty hopper detection
- Two hoppers can be linked together to operate side by side for greater capacity in large pay out applications or to offer twin denomination pay out capability.
- Optical switch coin counting with a special feature that warranties a minimum pulse length of 18 milliseconds, avoiding special software treatment of the holes in coins or tokens.
- Pay out rate approximately 3 or 4 coins per second
- White disc

KLOPP COIN COUNTERS / WRAPPERS AND SORTERS

Since 1931, Klopp has been a U. S. manufacturer of high quality, economically priced coin handling equipment. Their superb reputation for accuracy, rugged dependability and almost no breakdowns has been justifiably earned through the test of time. Their products are made in the USA.of cast aluminum and hardened steel. This means long life and minimal service. Klopp products are covered by a one year factory warranty on both parts and labor.

Here's how Klopp Coin Counter / Wrappers and Sorters benefit you:

- Eliminate 70% of the time now being spent to count and wrap coins by hand or with a plastic slide.
- Cut labor costs of coin processing by providing fast and accurate counts the first time.
- Eliminate human error caused by interruptions since the Klopp does the counting, not the operator.
- Speed bank deposit preparation.

THE KLOPP KONVERTIBLE ELECTRIC AND MANUAL COIN COUNTER

KLOPP® INTERNATIONAL, INC.

This portable coin counter wrapper-bagger can be operated electrically or manually. It's easy to convert to manual operation if electric power is not available - simply remove the hand crank from its storage location, insert it in the side of the counter housing and your ready to count. The hand crank is super easy to turn because Klopp's exclusive Pfraylea Bearing design eliminates all motor belt drag when operating manually. Klopp's positive lock-out system prevents electric coin counting operation while the hand crank is inserted into the counter. The Klopp Konvertible counts, wraps or bags $1.00, $.25, $.10, $.05, $.01 coins plus numerous tokens and non-U. S. coins, one denomination at a time. The Model KK does not sort mixed coins.

SPECIFICATIONS:

- Construction - Cast aluminum and hardened steel
- Portable - Model KK has a large hinged coin tray that folds to protect the controls from dirt or damage when not in use.
- Denominations - Counts, wraps or bags U. S. or Canada Dollar, $.25, $.10, $.05, $.01 plus .800, .882, .900, .984 and 1" tokens. KLOPP COIN COUNTER / WRAPPER / BAGGER

80-0064-CE
CE MODEL

KLOPP® INTERNATIONAL, INC.

QUALITY MADE IN THE U.S.A.

Counts, wraps or bags dollars, quarters, nickels, dimes, pennies and tokens one denomination at a time. Pour a large quantity of the same denomination of coins into the tray. Set the controls and insert a bank wrapper in the wrapping tube at the front of the unit. Turn the switch on or turn the crank handle and in four seconds the wrapper is filled with the proper number of coins and the unit automatically stops. Repeat this process until all coins are counted and wrapped. This unit will also count and bag coins instead of wrapping them. Just replace the wrapping tube with an optional bag tube at the front. The resettable meter will tell you the number of coins that have been counted into the bag.

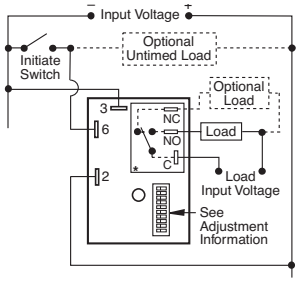
Isolated Output



With 30 ampres of switching capacity, it allows direct coin operated control of loads like compressors, pumps, motors, heaters and lighting.

This accumulating coin vending timer will count each closure of the initiate switch. When the total number of initiate switch closures equals the number to start set on the lower 3 DIP switches, the load is energized and the vending time is started. For every initiate switch closure, the accumulating coin vending timer adds one time per coin period, as set on the upper 7 DIP switches, to the total vending time.

Microcomputer accuracy, combined with a power relay, makes the Coin Vending Timer ideal for cost-sensitive single coin or token vending machines.

COVERING YOUR TABLES WITH CHAMPIONSHIP BILLIARD FABRIC IS LIKE MONEY IN THE BANK

The clink of quarters in a coin box: the only thing more reassuring to someone in the amusement industry is knowing their tables are covered with Championship fabric. That's because our fabrics are engineered to withstand the punishment of commercial use, yet satisfy the most demanding amateur and professional players. We also offer our fabrics in six-packs of pre-cut bed and rail sets in addition to bolts, giving you more control of your inventory. And because the future is never far away, we set the pace in billiard fabric innovation. That way, with Championship, you can keep the balls rolling true and the quarters rolling in.

INVITATIONAL

Invitational

A unique, 19-ounce weighted, wool blend, Invitational is the #1 selling fabric in the amusement industry. Color options include: (00) Basic Green and (43) Electric Blue, which glows under black light. Invitational is available both backed and unbacked.

MERCURY ULTRA

Mercury Ultra

The playability of a worsted and the durability of a wool blend make this fabric very popular in commercial and coin-operated billiard rooms. Mercury Ultra holds the honor of being chosen official billiard cloth to more amateur tournaments than any other fabric in the world. Color options include: (31) Tournament Green, (32) Dark Green, (62) Burgundy and (43) Electric Blue.

VALLEY Teflon® Ultra BILLIARD CLOTH

by Championship

Valley Teflon® Ultra

Our latest fabric is impregnated with a new Dupont® Teflon® formula which makes it practically stain resistant while having no effect on playability. This way, spills can be wiped away and your investment is protected. Available in (31) Tournament Green.

INSTRUCTIONS FOR USE

The Glass cloth works best just slightly dampened with water. Either sprinkle water on the entire cloth or wet half the cloth. In most cases there is no need to wipe the surface dry after the cloth has been used, as evaporation enables surfaces to air-dry to a lint and streak-free shine. You can also spray water directly on the surface to be cleaned and wipe with a dry cloth.
(Note: if water marks appear, the cloth may have been too dirty or wet).

INSTRUCTIONS FOR CLEANING

To improve the lifespan of the Tergo cloths, it is necessary to wash them on a regular basis. For quick cleaning after use, simply hand wash in hot water, or use a very small amount of dish or laundry detergent. Do not use hand soap as it contains oil. Be sure to rinse well. Wash the cloths in the washing machine, when required, in hot water with your normal load. Either air or tumble-dry, up to 90 degrees. Do this when required or whenever the cloth looks soiled. Periodically boil the cloths in water for a few minutes on your stovetop. This disinfects and causes the fibers to swell releasing trapped grease and dirt. Tergo cloths can be machine washed over 600 times (lasting several years).

Important: The Tergo cloths should not be ironed, nor washed with conditioner/fabric softener or dryer softener sheets, as it would reduce the cloth's static electricity! (Boil the cloth to remove any residue, if fabric softener is used). Avoid washing in a load with terry towels, unless you put them in a mesh bag for delicates to prevent lint build up. The cloth should not be used with stainable materials such as paints and inks. It's best to use enviro-safe detergent if possible. DO NOT USE CHLORINE BLEACH or abrasive solutions for cleaning or washing. This will shorten the life span of the cloth.

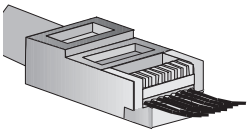
EZ-RJ45® CONNECTORS



The new patented EZ-RJ45® connector simplifies the twisted pair terminations by allowing the wires to be inserted through the connector and out the front. This allows the technician to easily verify the proper wiring order. Termination is made easier by pulling the connector down over the cable jacket and seating it tightly in the rear of the connector. Reducing the distance between the wire twists and contacts improves performance!

- Simple one-piece design – no bars or liners
- Easy to verify wire sequence
- Reduces scrap, no wasted crimps
- Faster terminations
- More reliable, higher performance
- Compatible with most RJ-45 crimp tools except for AMP

The unit also features an industry first process gate that identifies the tip being used and configures the station accordingly to ensure tip temperature accuracy. Additional features also include auto shutoff, and low temperature alarm, all in a modular ESD safe design

- Process Gate identifies tip in use and ensures accuracy of tip temperature
- Accurate tip temperature between 400°F and 840°F.
- Superior Thermal Recovery
- Automatic Power Shut-off
- Low Temperature Alarm
- Lock Out Control of set temperature
- Connector LED indicating iron is on

HAKKO 472D DESOLDERING TOOL

Desoldering process control made easy with the Hakko control card. The Hakko 472D comes with a control card. Use the card to enter temperature settings into the system memory. When the card is removed, all parameter settings and the temperature setting are"locked" in the system memory. This not only provides strict process control but also guards against operators making inadvertent changes.

- The Hakko 472D provides a pencil-type desoldering tool with powerful suction power.
- The short straight heating element aids in ease of operation
- The output circuit is isolated from the power input and insulated transformer.
- ESD Safe by design.
- Zero crossover switching on motor

HAKKO 808 DESOLDERING TOOL

The Hakko 808 is a handy, portable desoldering tool with a built-in vacuum pump. No separate station is required.

Thin, comfortable grip and low vibration. This unique Hakko design places the pump and motor above, not inside, the grip. Vibration is kept to a minimum, and the grip is thin and easy to hold. Delicate tasks are performed with greater ease; the tool can be used for long periods without operator fatigue.

Simple and inexpensive pump maintenance. The new, miniature, high-performance diaphragm pump is housed in the chamber at the rear of the Hakko 808. Pump maintenance is quick and easy-simply remove the cover. If repairs are ever needed, replacement parts are inexpensive.

- Tip-to-ground potential difference no greater than 2mV.
- Tip-to-ground resistance no greater than 2 ohms.
- Adjustable temperature control (380°C - 480°C / 715°F - 895°F).

HAKKO 493 SMOKE ABSORBER

- Soldering work involves both metallic and organic compounds; the solders themselves, and the fluxes necessary for soldering. These compounds release noxious fumes when heated, which can lead to both short and long term operator irritations and illness.
- The Hakko 493 is designed to remove these noxious fumes quickly, safely, and efficiently.
- The replaceable filter is made by joining a specific urethane foam with refined, activated high absorption carbon.
- The fan is fully adjustable, quiet, and efficient.

ESD safe by design. The entire unit is processed with a non-sloughing static dissipative conductive material.

SENCORE HA325 HORIZONTAL OUTPUT & FLYBACK TESTER

- With one simple hookup, the HA325 quickly identifies what is working and what isn't, without a schematic on any CRT based display
- Automatically analyzes the horizontal output circuits and tells you if they are good or bad and suggests the parts you need to test and repair on the display
- Improves the skill of your service technicians for faster more efficient repairs. Find the horizontal output transistor or IHVT (high voltage transformer), hook up the leads and the HA 325 automatically makes the analysis
- Cuts down on replacement repair costs. Replacing parts that aren't bad can be very expensive especially when parts have to be ordered and the game remains down while parts are on order
- The HA325 helps you to quickly and accurately determine defective parts in the horizontal output circuits

AP GOLDEN EYE GUARANTEED DELIVERY SYSTEM RETROFIT KITS

NEW

- Maximize your profits by ensuring vend success every time!
- Falling packages break the infrared transmissive sensor beam confirming a successful vend
- Eliminate credit vouchers and dissatisfied customers
- Flexible system allows you to choose the operating mode that works best for you
- Here's how Golden Eye works:

1) When a customer makes a selection, the spiral rotates one full revolution.
2) Golden Eye features an infrared transmissive sensor that detects if the product has dropped into the delivery bin.
3) Choose "Home" Mode or "Drop" Mode:
   a. "Home" mode: If the product fails to vend on the first try, the spiral will automatically make up to two additional revolutions in an attempt to vend the selection. As soon as the selection drops, the vend is complete and the spiral returns to the "home" position.
   b. "Drop" mode: If the product fails to vend, the spiral runs a partial revolution stopping when the product is detected. This method leaves the spiral in the position where it stops.
4) If, however, the selection still fails to vend after three attempts, the customer can make a new selection or receive a refund.
5) **Spiral position:**
   a. **"Home" mode:** Golden Eye always returns the spiral to the "home" position for optimal product display.
   b. **"Drop" mode:** Golden Eye keeps the spiral in it's stopping position, minimizing unpaid product loss.

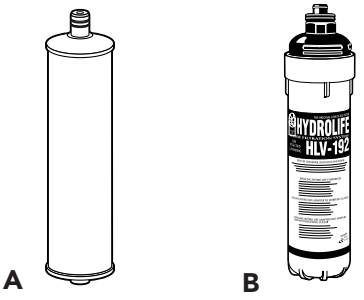
HYDRO LIFE WATER FILTER AND HEAD



- Hydro Life C1344 replacement water filter works on either hot or cold applications
- Removes or reduces chlorine, hydrogen sulfide, rotten egg smell, bad taste and odor
- In hot water applications, he unique media in Hydro Life water filter reduces lime and scale build up by altering the crystalline structure, taking away it's ability to cling, causing it to pass harmlessly on through the system, reducing maintenance costs
- In cold water applications, Hydro Life water filter controls bacteria growth, slime, yeast and mold
- The Hydro Life water filter media is U.S. EPA recognized as a bacteriostatic product, controlling bacteria build up in water lines. Bacteria is the cause of waterline contamination, turning black on the inside and altering the taste of the drink
- Independent lab tests have shown up to 90% lower bacteria levels using the Hydro Life water filter vs. most carbon only filters. Carbon is an organic medium, providing the environment and nutrients necessary for rapid bacteria growth
- Hydro Life water filter reduces chlorine in water by as much as 99%, based on Hydro Life's recommended schedule of changing the filter every 6 months or 2000 gallons
- The Hydro Life Adapter Kit easily fits directly into an Everpure head for equipment already in use. The Adapter Kit consists of 1 adapter head, 1 cartridge and 1 cartridge housing
- 6 cartridges per case
